**Study design** : A case report

**Result** : A 62 years old woman had abnormal movement in face arms and leg for about 2 months. She has past history of thyrotoxicosis and treatment with PTU. She had recurrence episode of abnormal movement off and on. Her physical examination found choreoathetotic movement at face tongue, hand and leg. The thyroid gland was enlarge with evidence of thyrotoxicosis. She had pretibial myxedema at left leg. Her thyroid function test was compatible with thyrotoxicosis. The clinical course and the others laboratory will be shown in the presentation.
